

# DISCOVERING GALAPAGOS

## HABITAT ZONES KEYWORDS

*Matchup the keyword to the definition!*

**Deciduous**

An area with similar environmental conditions throughout.

**Colonisation**

A collection of living organisms and non-living matter, which interact with one another.

**Primary Producer**

A biological term for the spread of plants and animals into new areas. Colonisers are species that begin living in habitats that they were not previously found in.

**Ecosystems**

A type of plant that has a leaf cycle whereby the leaves fall off seasonally.

**Habitat Zones**

An organism that consumes producers. In the Galapagos Islands, primary consumers include insects, crabs and marine iguanas.
